

Around the globe, businesses rely on us to create new capabilities for their application portfolios. Using our full range of services – from custom application development, testing and maintenance through package deployment, upgrades and consulting – you can invest more strategically in core business activities, while improving ROI from tight IT budgets.

### Services We Offer

Through our **Application Development** and systems integration services, you can gain consulting and delivery expertise in both end-to-end systems integration and custom application development. Our services can help you drive innovation and expand into new markets while reducing overall costs.

### Application Development

At **RSPL**, we help define your requirements, write specifications and design, develop, test and integrate software across multiple platforms – including Internet technologies – enabling your systems to function in new operating environments.

We follow one of two approaches to application development and integration:

- **Full life-cycle application development**, in which we assume start-to-finish responsibility for analysis, design, implementation, testing and integration of systems; or
- **Cooperative development**, in which our experts work with your in-house IT personnel to jointly analyze, design, implement, test and integrate new systems

A key facet of our offering is a suite of services to help you build and integrate sophisticated business applications and/or websites with your client server and legacy systems. We create and deploy robust, scalable and extensible architectures for use in a wide range of industries.

Our custom application development services include:

- Application design, development and implementation
- Systems integration/consolidation
- Re-engineering, performance tuning and porting services for existing systems
- Implementation of products
- Database administration and Migration

Feasibility and requirement analysis for business case

### Our Approach

**The Resilient Difference:** It's in our DNA. Placing our clients first is embedded in the Resilient's culture. By investing in our people and resources, we bring new ideas and innovation to help you succeed in a changing business environment.

## Offshore Development and Support Model

**Resilient** is a diversified software and IT outsourcing services company specializing in the business of providing services to its clients globally. Our forte encompasses the broad spectrum of your business-whether building custom applications, developing database applications, tailoring an existing software product to meet new requirements or providing support, our software development processes are optimized to deliver cost effective and high quality services and products. Our proven processes ensure cost-effective solutions delivered in minimal time frames ensuring maximum ROI for our clients.

**Resilient** offers its clients increased flexibility and at the same time direct savings on development and maintenance of outsourced software solutions. Our core competency lies in reducing costs and improving productivity by bringing the strategic advantage of Software Outsourcing and Offshore Software Development to the doorstep of our customer in more ways than one. Thereby improving reliability, speed, agility and enabling our customers to achieve sustainable differential advantage over their competition through offshore software development.

### Our Value Proposition Lies In:

- Global delivery model with defined delivery metrics
- Business process expertise
- Matrix organization structure and rich resource pool
- Focus on resource re-usability thus reducing cycle times and cost
- Track the SLAs norms which are transparent even to our customers
- Knowledge Management – knowledge acquisition and retention
